DATE MAILED: 05/17/2004				

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.	09/736,438	Applicant(s)	ITOKAWA, OSAMU
Examiner	Hussein Akhavannik	Art Unit	2621

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) Responsive to communication(s) filed on _____.
- 2a) This action is **FINAL**. 2b) This action is non-final.
- 3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) Claim(s) 1-12 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) Claim(s) _____ is/are allowed.
- 6) Claim(s) 1-12 is/are rejected.
- 7) Claim(s) _____ is/are objected to.
- 8) Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) The specification is objected to by the Examiner.
- 10) The drawing(s) filed on 01 April 2004 is/are: a) accepted or b) objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) All b) Some * c) None of:
 1. Certified copies of the priority documents have been received.
 2. Certified copies of the priority documents have been received in Application No. _____.
 3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

1) <input type="checkbox"/> Notice of References Cited (PTO-892)	4) <input type="checkbox"/> Interview Summary (PTO-413)
2) <input type="checkbox"/> Notice of Draftsperson's Patent Drawing Review (PTO-948)	Paper No(s)/Mail Date. _____.
3) <input type="checkbox"/> Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08) Paper No(s)/Mail Date _____.	5) <input type="checkbox"/> Notice of Informal Patent Application (PTO-152)
	6) <input type="checkbox"/> Other: _____.

DETAILED ACTION

Drawings

1. The drawings were received on April 1, 2004. These drawings are accepted.

Response to Arguments

2. Applicant's arguments filed April 1, 2004 have been fully considered but they are not persuasive.

The Applicant allege that Sun et al do not teach or suggest controlling a code amount of an object having a predetermined priority order among plural objects, when the total code amount of the plural objects exceeds a predetermined code amount. The Examiner respectfully disagrees. As the Applicant explains on page 8, lines 14-16 of the remarks, Sun et al teach in column 9, lines 40-63 that a code amount $T[i]$ is determined for each object in a frame based on the object's size, motion, and variation. This code amount corresponds to a priority order because an object with a higher allocated code amount $T[i]$ is given a higher priority (or significance) in the frame and is therefore, allotted a greater number of bits for encoding within the constant number of total bits allocated for each frame. Thus, just as the priority number of the present invention assigns a significance to each object and encodes objects having a higher priority at a higher bit rate, Sun et al assign each object a code amount $T[i]$ and also encode objects having a higher code amount (or priority) at a higher bit rate.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claims 1-5 and 7-12 are rejected under 35 U.S.C. 102(e) as being anticipated by Sun et al (U.S. Patent No. 5,969,764).

Referring to claim 1, which is representative of claims 11 and 12,

i. Inputting means for inputting image data of plural objects is illustrated by Sun et al in figure 5 by the digital image source (10).

ii. Encoding means for encoding, with encoding conditions, the image data inputted by the input means on an object basis is explained by Sun et al in column 4, lines 43-51.

Sun et al explain that the video signal encoder (12 of figure 5) is provided image information on a Video Object basis, corresponding to the general encoding method of MPEG-4. The encoding conditions are explained by Sun et al by the code amount assigned to each video object as explained in column 9, lines 40-63.

iii. Control means for setting a priority order of code amount allocation for each of the objects and in accordance with the priority order, controlling the encoding conditions of the object having a predetermined priority order is explained by Sun et al in column 6, line 56 to column 7, line 4 and column 9, lines 40-63. Sun et al explain that bits available in a buffer (column 6, lines 28-35) are redistributed according to a priority allocation amount of the objects, which is determined based on the size of the object and the amount of activity that the object is experiencing. The equation to determine the allocation amount is based on weighted motion, size, and mean absolute difference parameters.

Therefore, objects with a greater size, motion, or mean absolute difference would be given a higher priority and thereby allocated a larger number of bits for encoding.

iv. The control means setting a priority order of code amount allocation when a total code amount obtained by encoding the image data of the plural objects exceeds a predetermined code amount is explained by Sun et al in column 6, lines 28-35 wherein the predetermined code amount is given by the target rate, which cannot be exceeded.

Referring to claim 2, the control means changing the priority order at a predetermined timing is explained by Sun et al in column 9, lines 40-42. Sun et al explain that the objects are encoded at the same frame rate and therefore the priority order of each object would be determined for every frame, corresponding to a predetermined timing.

Referring to claim 3, the predetermined timing being determined according to how many times a code amount reduction processing for the objects is executed or according to code amounts of the objects is explained by Sun et al in column 9, lines 40-42. Sun et al explain that the priority bit allocation amount of each video object is determined in each frame. Therefore, when each video object has been processed once, then the system of Sun et al will process the next object. Therefore, the system of Sun et al changes the priority bit allocation amount of each object according to how many times the processing has been performed for each object.

Referring to claim 4, when the code amount of an object set to a lowest priority becomes smaller than a predetermined lower limit value, the control means setting another object to the lowest priority is explained by Sun et al in column 6, line 64 to column 7, line 4. Sun et al explain if lower bound constraints on the bits used to encode an object are exceeded, then the

system will invoke the pre-frame skip control. By skipping frames, the bit allocation to an object can be increased so that the lower bound constraints are not met.

Referring to claim 5, the encoding means breaking down the image data of the objects into pixel data and shape data and encoding the pixel data and shape data and the control means determining the priority order in accordance with a size of shape data of the objects is explained by Sun et al in the abstract and in column 9, lines 40-64. Sun et al explain in the abstract that the texture (corresponding to the pixel data), motion, and shape data of each object is encoded. The priority order of the bit allocation of the objects is explained to be a function of the motion, size, and mean absolute difference of each object. Therefore, objects with a greater size, motion, or mean absolute difference would be given a higher priority and thereby allocated a larger number of bits for encoding.

Referring to claim 7, the encoding means including quantization means for quantizing the image data of the objects and quantization parameters of the quantization means being controlled by the encoding conditions is explained by Sun et al in column 9, lines 21-27 and illustrated in figure 3. The quantization means (25) determines the quantization parameters according to the target distribution (32).

Referring to claim 8, a recording means for recording the data encoded by the encoding means into a recording medium is illustrated by Sun et al in figure 5 by the buffer (17).

Referring to claim 9, the inputting means comprising image pickup means for photographing an object image and generating image data is illustrated by Sun et al in figure 5 by the digital image source (10).

Referring to claim 10, a video camera being provided with the image processing apparatus is data is illustrated by Sun et al in figure 5 by the digital image source (10) connected to the image processing apparatus (12). Sun et al explain in the abstract that the image processing is performed on video data, which is captured by a video camera.

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over Sun et al in view of Suzuki et al (U.S. Patent No. 6,415,057).

Referring to claim 6, the encoding means executing the encoding operation in accordance with MPEG-4 and the control means determining the priority order in accordance with the sizes of the bounding boxes of the objects is explained by Sun et al in column 4, lines 59-65. Sun et al explain that the encoding is performed as described according to the MPEG-4 standard.

However, Sun et al do not explicitly explain using bounding boxes to describe the size of the objects. Suzuki et al illustrate using bounding boxes to explain the dimensions of an object in figures 11A and 11B. By using bounding boxes to describe the dimensions of an object, the area of the box can be determined by a simple multiplication of the two dimensions in order to determine the bit allocation amount for the object in the system of Sun et al. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to use a

bounding box to explain the size of an object so that the object size is described more efficiently as it is a function of only two variables.

Conclusion

7. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Hussein Akhavannik whose telephone number is (703)306-4049. The examiner can normally be reached on M-F 8:30-5:00.

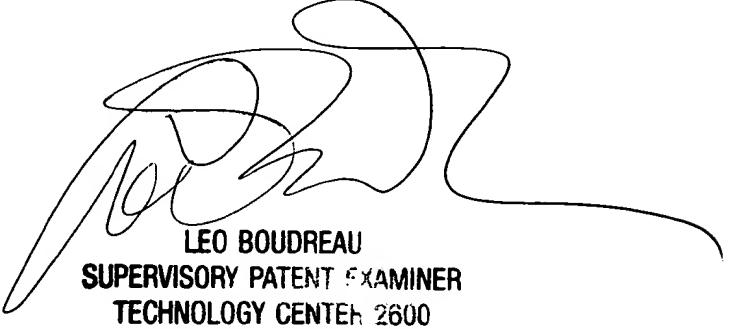

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Leo H. Boudreau can be reached on (703)305-4706. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Art Unit: 2621

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
